
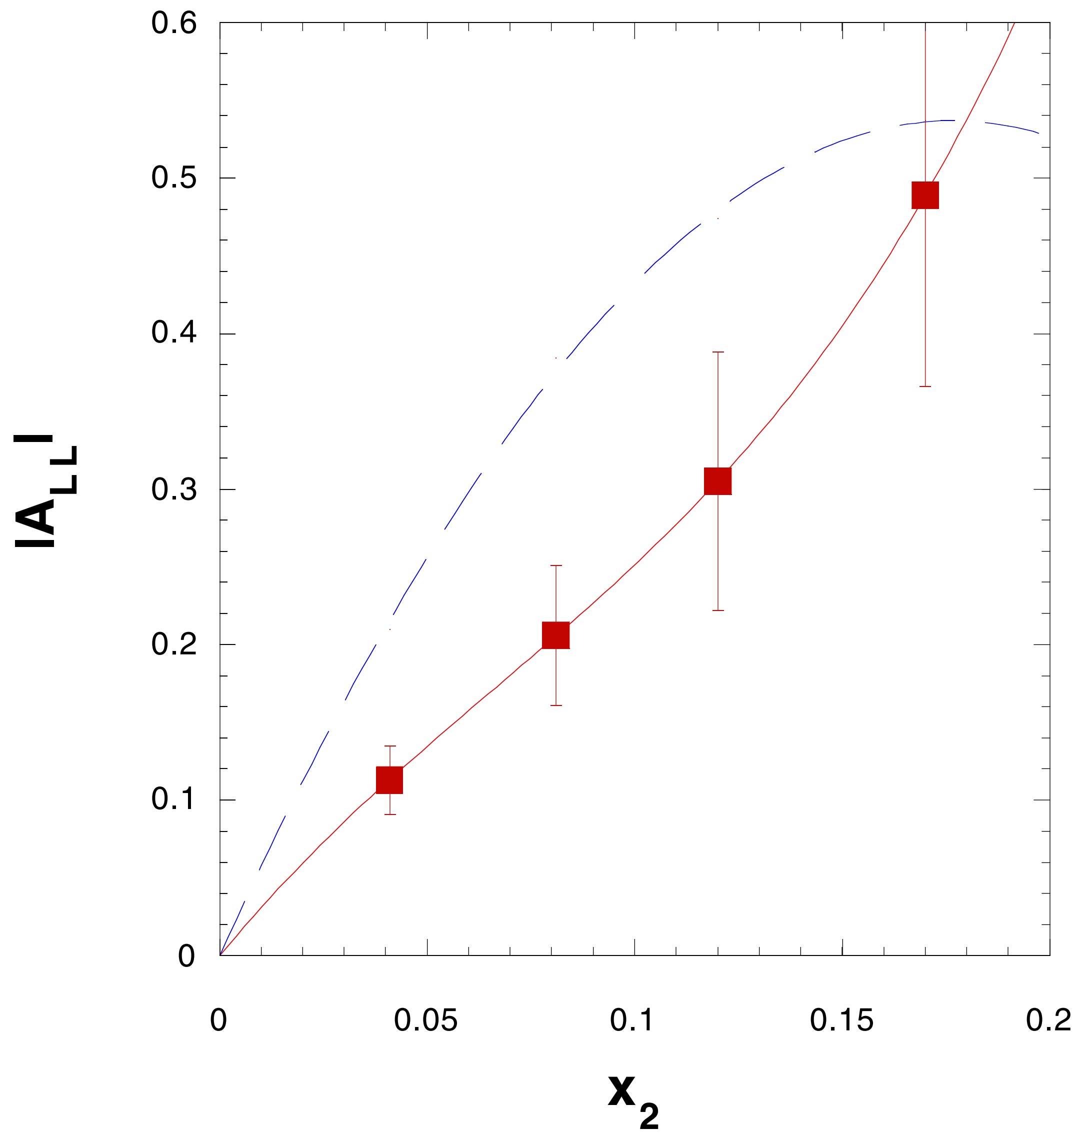

Figure 6. Helicity asymmetry using Eq. 5 and the model of Bourrely and Soffer[19]. Two extrapolations consistent with the experimental results from CERN NA51[21] yield the two curves. Error bars (shown on the lower curve) are based on an integrated luminosity of $2 \times 10^{38} cm^{-2}$ at $\sqrt{s}$ = 50 GeV; beam polarizations are taken to be 0.7
